An uproarious and frank memoir of illness and recovery, No Laughing Matter is a story of friendship and recuperation from the author of the classic Catch-22. It all began one typical day in the life of Joe Heller. He was jogging four miles at a clip these days, working on his novel God Knows, coping with the complications of an unpleasant divorce, and pigging out once or twice a week on Chinese food with cronies like Mel Brooks, Mario Puzo, and his buddy of more than twenty years, Speed Vogel. He was feeling perfectly fine that day—but within twenty-four hours he would be in intensive care at Manhattan's Mount Sinai Hospital. He would remain hospitalized for nearly six months and leave in a wheelchair. Joseph Heller had Guillain-Barré syndrome, a debilitating, sometimes fatal condition that can leave its victims paralyzed from head to toe. The clan gathered immediately. Speed—sometime artist, sometime businessman, sometime herring taster, and now a coauthor—moved into Joe's apartment as messenger, servant, and shaman. Mel Brooks, arch-hypochondriac of the Western world, knew as much about Heller's condition as the doctors. Mario Puzo, author of the preeminent gangster novel of our time, proved to be the most reluctant man ever to be dragged along on a hospital visit. These and lots of others rallied around the sickbed in a show of loyalty and friendship that not only built a wild and spirited camaraderie but helped bring Joe Heller, writer and buddy extraordinaire, through his greatest crisis. This book is an inspiring, hilarious memoir of a calamitous illness and the rocky road to recuperation—as only the author of Catch-22 and the friend who helped him back to health could tell it. No Laughing Matter is as wacky, terrifying, and greathearted as any fiction Joseph Heller ever wrote.

Instead of building new hospitals that import old systems and problems, the time has come to reexamine many of our ideas about what a hospital should be. Can a building foster continuous improvement? How can we design it to be flexible and useful well into the future? How can we do more with less? Winner of a 2013 Shingo Prize for Operational Excellence! Answering these questions and more, Lean-Led Hospital Design: Creating the Efficient Hospital of the Future explains how hospitals can be built to increase patient safety and reduce wait times while eliminating waste, lowering costs, and easing some of healthcare's most persistent problems. It supplies a simplified timeline of architectural planning—from start to finish—to guide readers through the various stages of the Lean design development philosophy, including Lean architectural design and Lean work design. It includes examples from several real healthcare facility design and construction projects, as well as interviews with hospital leaders and architects. Check out a video of the authors discussing their book, Lean-Led Hospital Design at the 2012 Med Assets Healthcare Business Summit. www.modernhealthcare.com/section/LiveatHBS

Many students wonder what it is like to die or how to cope when someone they love dies. Living, Dying, Grieving helps answer these important questions and provides a mature understanding of what death really is. Taking a "Life education" approach, this book offers helpful tips and techniques for mastering a fear of death, suggests helpful ideas for taking care of the business of dying, and encourages students to live longer by adding excitement into their lives. With its unique balance of facts and emotions, both of which surround living, dying, and grieving across cultures and religions, the text gives students the perspective to effectively cope with death and the effects it will have on their lives.

With the introduction of cardiac surgery more than five decades ago and the use of the heart-lung machine for open heart surgical procedures granting the surgeon unlimited time in which to operate inside the heart, a complex task has been given to the Perfusionist. Community & Public Health Nursing is designed to provide students a basic grounding in public health nursing principles while emphasizing aggregate-level nursing. While weaving in meaningful examples from practice throughout the text, the authors coach students on how to navigate between conceptualizing about a population-focus while also continuing to advocate and care for individuals, families, and aggregates. This student-friendly, highly illustrated text engages students, and by doing so, eases students into readily applying public health principles along with evidence-based practice, nursing science, and skills that promote health, prevent disease, as well as protect at-risk populations! What the 8th edition of this text does best is assist students in broadening the base of their knowledge and skills that they can employ in both the community and acute care settings, while the newly enhanced ancillary resources offers interactive tools that allow students of all learning styles to master public health nursing.
