When a biomaterial is placed inside the body, a biological response is triggered almost instantaneously. With devices that need to remain in the body for long periods, such interactions can cause encrustation, plaque formation and aseptic loosening on the surface. These problems contribute to the patient's trauma and increase the risk of death.

Biological Interactions with Surface Charge in ... Surface charge emits an electric field, which causes particle repulsion and attraction, affecting many colloidal properties. Surface charge practically always appears on the particle surface when it is placed into a fluid. Most fluids contain ions, positive and negative . These ions interact with the object surface.

Biological Interactions with Surface Charge in ... Such elaborate discussions show the relevance of surface charge in biological interactions at and with non-biological surfaces and, I strongly believe, will provide a solid foundation for interested readers who are willing to bring innovative ideas of surface modifications to generate or control a specific biological response on implantable therapeutic devices.

Eichi Fukada reviews Biological Interactions with Surface ... The growing potential of quantum dots (QDs) in biomedical applications has provoked the urgent need to thoroughly address their interaction with biological systems. However, only limited studies have been performed to explore the effects of surface charge on the biological behaviors of QDs. In the p ...

Role of surface charge in determining the biological ... For example, chapter 5 discusses immobilized enzymes on porous surfaces in biocatalysts, drug delivery, and biosensors, while chapter 6 goes on to describe improvement of the extracellular matrix (ECM) by the interactions of host tissue cells with the implant surface Chapters 7, 8 and 9 discuss antibody immobilization on solid surfaces, adhesion, proliferation and differentiation of bone-forming cells with electrostatic charge at biomaterials surfaces and interactions of biofilm-forming ...

Biological Interactions with Surface Charge in ... bulletins, we will be primarily concerned with the surface and its interactions with biomolecules. Interfaces Proteins and other biomolecules denature at interfaces. During the course of an immunoassay, several interfaces are formed that affect the structure and function of the biological components.

Biological interactions with surface charge in ... Biodistribution studies demonstrated that negative and neutral QDs preferentially distributed in the liver and the spleen, whereas positive QDs mainly deposited in the kidney with obvious uptake in the brain. In general, surface charge plays crucial roles in determining the biological interactions of QDs. PMID: PMC4655958 PMID: 26604757
