Ecology and Evolution To understand the past, present and future of biological diversity, we work at scales ranging from genome organisation to global change biology. Our research is addressing current and future issues around environmental change. We achieve this by combining theoretical research with laboratory studies and fieldwork.

The Diversity of Fishes Biology, Evolution, and Ecology ...

Evolutionary biology is the subfield of biology that studies the evolutionary processes (natural selection, common descent, speciation) that produced the diversity of life on Earth. In the 1930s, the discipline of evolutionary biology emerged through what Julian Huxley called the modern synthesis of understanding, from previously unrelated fields of biological research, such as genetics and ...

We identified a rich diversity of plant and mammal mOTUs, classifying 91% to the genus or species level (Supplementary Table S2), allowing for high-resolution assessments of species dietary richness, niche breadth and overlap, and diversity of the community. To the best of our knowledge, this is the first published molecular analysis of gray fox, coyote and black-tail jackrabbit plant diets.
