It is a commonplace that pollution knows no borders, and that environmental law must allow for cross-border implementation. The European Union specifies this principle in EC directives on integrated pollution prevention and control (IPPC), on environmental impact assessment (EIA), and on the control of major accident hazards involving dangerous substances (Seveso II). This is the first book to investigate from both empirical and normative perspectives the effectiveness of these directives at the national level. It provides by far the most extensive comparative analysis and evaluation of the industrial permitting and inspections, EIA, and major accident prevention in the EU. Offering an in-depth study of the transposition and implementation of EC environmental directives in eight EU member states (Denmark, France, Germany, Italy, the Netherlands, Spain, Sweden, and the United Kingdom), the author who has played a significant role in the formulation of environmental legislation and regulation at both the national (German) and EU levels and provides a stable base for an assessment of the benefits and costs of the integrated approach to environmental protection. Among the factors considered are

the following: key features of national constitutional, administrative, and judicial systems which provide the framework for environmental regulations and their implementation in the eight countries under study; procedures and substantive requirements transposing the IPPC, EIA and Seveso II directives into national laws; and evaluation of national deficiencies and the extent of muddling through. The empirical part of Dr Bohne's analysis draws on 138 expert interviews with public and private actors, a survey of 178 public authorities, and document analyses of selected industrial permits and environmental impact statements. His comparative analysis of procedural, organizational, and substantive integration makes it possible to identify and compare national accomplishments in regulatory integration, and offers new insights into the effectiveness and limits of EC law. The study concludes with a discussion of the implications of the findings for European governance and better regulation after the enlargement of the EU. This thoroughly researched, rigorous, and insightful study will be of great interest and value to policymakers, regulators, business people, environmental NGOs, consultants, and lawyers, as well as to students of environmental policies and European governance.

Offering a detailed legal account of the various legal arrangements at EU level this book is an ideal reference tool for practitioners and legal scholars. As well as examining the principle sources of EU environmental law enforcement, it also contributes to the legal and political debates that surround the subject. Spanning three parts, the author examines and assesses the practical impact of the legal arrangements at EU level that are used for the purpose of upholding EU environmental norms. Providing a comprehensive account of the current state of EU environmental law enforcement and developments affecting it, *Enforcing European Union Environmental Law* focuses on the principal sources of EU environmental law enforcement, examining: the role of the European Commission the possibilities for private law enforcement the responsibilities of Member State national authorities. An essential read for those studying, researching and working in the areas of environmental and European Union law.

economic growth among developed countries, largely based upon the exploitation of fossil fuels, and unparalleled population growth in developing countries. These broad trends in turn did massive damage to the environment. Biodiversity has suffered its biggest reverse since the last great extinctions in geological time, and the burning of fossil fuels has begun to change our climate. But it was only at the end of the century that environmental concerns were transformed from a narrow sectional interest, moving to the centre-stage of government, and on to the main agendas of companies. Once a minority interest, the environment now commands the attention of ministers, chief executives, and consumers in the supermarket. Party manifestos proclaim the greenness of politicians, companies produce environmental reports, and shoppers opt for organic food and avoid genetically modified products. This volume focuses on the practical design of economic instruments for environmental policy. It is divided into three parts: the overarching policy context; the choice of policy instruments; and applications to the main sectors of the economy.

"Now that economic development is starting to pick up in many countries in Africa, the question arises how such development can be balanced with the need for adequate environmental protection. This crucial issue, inherent in the notion of sustainable

development, is addressed in this innovative and path-breaking volume. For the first time, academics from seventeen African countries have joined forces to analyse the way in which economic and environmental interests are balanced in their legal systems. The authors all use a common framework to improve the comparability of the country studies. The different country-related chapters do not only provide insights into the formally applicable legal rules (law in the books), but given that the book brings together academics aware of the practice in Africa, they also describe the way in which environmental policy functions in practice (law in action). Many case studies, with conceptual analyses are provided of pollution incidents and the way in which administrative agencies or courts have on those occasions balanced the interests between the economy, society and the environment. A critical comparative analysis by the editors points at tendencies towards convergence and points of divergence between the African countries. Suggestions for policy reform are also formulated, showing African countries how they can benefit from experiences in the US and Europe. This thought provoking volume is a must for anyone (academic, policymaker or practitioner) interested in sustainable development generally and in Africa in particular."--P. [4] of cover.

Blackstone's Statute Books are designed specifically to provide students with a collection of statutes for use throughout their course, and now cover all the main law subjects. The series has been produced following careful research of the syllabuses of most law courses. As a result, the authors have been able to produce a concise collection of relevant statutes, eliminating some of the non-essential material and concentrating on the more important statutes. As many courses move towards allowing statute books to be taken into examinations, this series should be suitable for that purpose.

This textbook provides a concise introduction for students with little or no legal background, to the role of law in environmental protection. It describes and explains law and legal systems, the concept of the environment, sources of environmental law and some of the techniques used in environmental law. Interdisciplinary in approach, the book explores some of the major connections between law and the disciplines of ethics, science, economics and politics. Environment and Law offers a greater understanding of international and national environmental law and has case-studies from

all over the world, including examples from UK, US and Australian law.

The ecosystem approach, broadly understood as a legal and governance strategy for integrated environmental and biodiversity management, has been adopted within a wide variety of international environmental legal regimes and provides a narrative, a policy approach and in some cases legally binding obligations for States to implement what has been called a 'new paradigm' of environmental management. In this last respect, the ecosystem approach is also often considered to offer an opportunity to move beyond the outdated anthropocentric framework underpinning much of international environmental law, thus helping re-think law in the Anthropocene. Against this background, this book addresses the question of whether the ecosystem approach represents a paradigm shift in international environmental law and governance, or whether it is in conceptual and operative continuity with legal modernity. This central question is explored through a combined genealogical and biopolitical framework, which reveals how the ecosystem approach is the result of multiple contingencies and contestations, and of the interplay of divergent and sometimes irreconcilable ideological projects. The ecosystem approach, this book shows, does not have a univocal identity, and must be understood as both signalling the potential

for a decisive shift in the philosophical orientation of law and the operationalisation of a biopolitical framework of control that is in continuity with, and even intensifies, the eco-destructive tendencies of legal modernity. It is, however, in revealing this disjunction that the book opens up the possibility of moving beyond the already tired assessment of environmental law through the binary of anthropocentrism and ecocentrism.

Environmental Law: Text, Cases, and Materials has been designed to provide students with everything they need to approach the subject with confidence. Experts in the area, the authors combine clear and insightful commentary with carefully chosen extracts from UK and international sources to offer students a well-rounded view of the subject area. Covering a broad range of topics, the authors introduce discussion on controversies and debates and encourage readers to engage in critical reflection by posing regular discussion questions throughout the text. Further reading suggestions point students towards useful resources, guiding their independent research. Online Resources This book is also accompanied by online updates collated by the authors, helping students to stay well-informed.
