Bovine spongiform encephalopathy (BSE) Transmissible spongiform encephalopathies (TSEs) are a family of diseases of humans and animals characterized by spongy degeneration of the brain with severe and fatal neurological signs and symptoms. In animals, scrapie is a common disease in sheep and goats. Mink and North American mule deer and elk can contract TSEs.

WHO | Bovine spongiform encephalopathy (BSE)

Bovine spongiform encephalopathy is also known as BSE or mad cow disease. It's a brain disease that can infect cattle, sheep and goats. If this infected meat is eaten by humans it can result in serious illness and death. BSE belongs to a family of diseases, several of which can affect humans.

Bovine spongiform encephalopathy (BSE) | Food Standards Agency

Bovine spongiform encephalopathy (BSE), commonly known as mad cow disease, is a neurodegenerative disease of cattle. Symptoms include abnormal behavior, trouble walking, and weight loss. Later in the course of the disease the cow becomes unable to function normally. The time between infection and onset of symptoms is generally four to five years. Time from onset of symptoms to death is ...

Bovine spongiform encephalopathy - Wikipedia

BSE (bovine spongiform encephalopathy) is a progressive neurological disorder of cattle that results from infection by an unusual transmissible agent called a prion. The nature of the transmissible agent is not well understood. Currently, the most accepted theory is that the agent is a modified form of a normal protein known as prion protein.

Bovine Spongiform Encephalopathy (BSE)

Bovine spongiform encephalopathy (BSE), commonly known as "mad cow disease," is a fatal disease that strikes the nervous system of cattle. BSE is part of a group of diseases called prion diseases that occur in both animals and humans. The main animal forms are chronic wasting disease in deer, scrapie in sheep, and mad cow disease.

Bovine Spongiform Encephalopathy - Causes, Symptoms ...

Bovine spongiform encephalopathy (BSE) is a progressive, fatal disease of the nervous system of cattle. BSE is caused by the accumulation of an abnormal protein called "prion" in nervous tissue. Two forms, or strains, can be distinguished: classical BSE occurs in cattle after ingesting prion contaminated feed; atypical BSE is believed to occur spontaneously in all cattle populations.

Bovine spongiform encephalopathy : OIE - World ...

Bovine spongiform encephalopathy (BSE), known as mad cow disease, is a fatal brain disease that affects cattle. BSE is a notifiable animal disease. If you suspect it you must report it immediately...

BSE: how to spot and report the disease - GOV.UK

Bovine Spongiform Encephalopathy (BSE) BSE is a progressive, fatal disease of the nervous system of cattle. It is what is known as a transmissible spongiform encephalopathy (TSE). Other TSEs include scrapie in sheep, chronic wasting disease in deer and elk, and Creutzfeldt-Jakob disease in humans. Although the exact cause of BSE is unknown, it is associated with the presence of an abnormal protein called a prion.

Bovine Spongiform Encephalopathy (BSE) - Canadian Food ...

The word BSE is short but it stands for a disease with a long name, bovine spongiform encephalopathy. "Bovine" means that the disease affects cows, "spongiform" refers to the way the brain from a...

All About BSE (Mad Cow Disease) | FDA

Bovine Spongiform Encephalopathy is more commonly known to humans as Mad Cow Disease or BSE. BSE originated from scrapie or Endemic Spongiform Encephalopathy, which is a disease that has affected mostly sheep and goats. BSE is an illness that attacks the brain and spinal cord of adult cattle due to an infection by a transmissible agent known as ...

Bovine spongiform encephalopathy | Bartleby

Bovine spongiform encephalopathy (BSE) is a progressive, fatal, infectious, neurologic disease of cattle that resembles scrapie of sheep and goats (see Scrapie). It was first diagnosed in the UK in 1986. Approximately 200,000 cases of BSE have been diagnosed in cattle, with 97% reported from the UK.

Overview of Bovine Spongiform Encephalopathy - Nervous ...

Bovine spongiform encephalopathy (BSE) Also known as "Mad Cow disease", this fatal disease can be transmitted to humans. BSE is a notifiable disease.

Bovine spongiform encephalopathy (BSE) | GOV.WALES

BSE is a brain disease of cattle for which there is no treatment. It is confirmed after the death of the animal by examining its brain tissue. BSE is notifiable and there is a Departmental...

Introduction to Bovine Spongiform Encephalopathy (BSE) ...

Bovine spongiform encephalopathy (BSE) is the only animal prion disease that has been demonstrated to be zoonotic, causing variant Creutzfeldt–Jakob disease (vCJD) in humans. The link between BSE and vCJD was established by careful surveillance, epidemiologic investigations, and experimental studies using in vivo and in vitro models of cross-species transmission.

Bovine Spongiform Encephalopathy - an overview ...

Bovine Spongiform Encephalopathy (BSE), widely referred to as "mad cow disease," is a progressive and fatal neurologic disease of cattle. It is caused by an unconventional transmissible agent, an abnormal prion protein.

USDA APHIS | Bovine Spongiform Encephalopathy (BSE)

Atypical neuropathological and molecular phenotypes of bovine spongiform encephalopathy (BSE) have recently been identified in different countries. One of these phenotypes, named bovine "amyloidotic" spongiform encephalopathy (BASE), differs from classical BSE for the occurrence of a distinct type of the disease-associated prion protein (PrP), termed PrP(Sc), and the presence of PrP amyloid ...

Conversion of the BASE prion strain into the BSE strain ...

Bovine Spongiform Encephalopathy (BSE) is a transmissible, neurodegenerative, fatal brain disease of cattle. The disease has a long incubation period of four to five years, but ultimately is fatal for cattle within weeks to months of its onset.
