It needs to be treated but is not life-threatening. Breast cancer usually starts in the cells that line the lobules and the milk ducts that carry milk from the lobule out through the nipple. The place where DCIS starts is the terminal duct lobular unit.**

*Ductal carcinoma in situ (DCIS) - Macmillan Cancer Support*

Ductal carcinoma in situ (DCIS) is the presence of abnormal cells inside a milk duct in the breast. DCIS is considered the earliest form of breast cancer. DCIS is noninvasive, meaning it hasn't spread out of the milk duct and has a low risk of becoming invasive.

*Ductal carcinoma in situ (DCIS) - Symptoms and causes ...*

About 1 in 5 new breast cancers will be ductal carcinoma in situ (DCIS). Nearly all women with this early stage of breast cancer can be cured. DCIS is also called intraductal carcinoma or stage 0 breast cancer. DCIS is a non-invasive or pre-invasive breast cancer. This means the cells that line the ducts have changed to cancer cells but they have not spread through the walls of the ducts into the nearby breast tissue.

*Ductal Carcinoma in Situ (DCIS)*

Ductal carcinoma in situ (DCIS) DCIS means that some cells in the lining of the ducts of the breast tissue have started to turn into cancer cells. These cells are all contained inside the ducts. They have not started to spread into the surrounding breast tissue.

*Ductal carcinoma in situ (DCIS) | Breast Cancer | Cancer ...*

Ductal Carcinoma in Situ (DCIS), also known as intraductal carcinoma, accounts for one of every five new breast cancer diagnoses. It's an uncontrolled growth of cells within the breast ducts. It's...

*Invasive Ductal Carcinoma (IDC) & Ductal Carcinoma In Situ ...*

Ductal carcinoma in situ, also known as intraductal carcinoma, is a pre-cancerous or non-invasive cancerous lesion of the breast. DCIS is classified as Stage 0. It rarely produces symptoms or a breast lump one can feel, typically being detected through screening mammography. In DCIS, abnormal cells are found in the lining of one or more milk ducts in the breast. In situ means "in place" and refers to the fact that the abnormal cells have not moved out of the mammary duct and into any of the surr

*Ductal carcinoma in situ - Wikipedia*

If you've been diagnosed with noninvasive breast cancer, you're probably wondering what treatment you'll need. Doctors often call this type of breast cancer ductal carcinoma in situ (DCIS). It gets...

*Treating Noninvasive Breast Cancer (Ductal Carcinoma in Situ)*

Ductal carcinoma in situ (DCIS) is non-invasive breast cancer. Ductal means that the cancer starts inside the milk ducts, carcinoma refers to any cancer that begins in the skin or other tissues (including breast tissue) that cover or line the internal organs, and in situ means "in its original place." DCIS is called "non-invasive" because it hasn't spread beyond the milk duct into any normal surrounding breast tissue.

*Ductal Carcinoma In Situ: Symptoms, Diagnosis, and Treatment*

Ductal carcinoma in situ (DCIS) means the cells that line the milk ducts of the breast have become cancer, but they have not spread into surrounding breast tissue. DCIS is considered non-invasive or pre-invasive breast cancer.

*Treatment of Ductal Carcinoma in Situ (DCIS)*

What Is The Difference Between Invasive Ductal Carcinoma (IDC) And Ductal Carcinoma In Situ (DCIS)? DCIS means the cancer is still contained in the milk duct and has not invaded any other area. IDC is cancer that began growing in the duct and is invading the surrounding tissue.

*Invasive Ductal Carcinoma (IDC) - National Breast Cancer ...*

Ductal Carcinoma in Situ: proliferating cancer cells still contained within the breast duct DCIS differs from Atypical Ductal Hyperplasia in that the atypical cell growth is now disturbing the stroma or supporting- framework cells of the duct, but has not yet penetrated the duct wall.

*Grading and Types of DCIS, including papillary, cribriform*

The incidence of ductal carcinoma in situ (DCIS) has increased rapidly since the widespread use of mammographic screening. Nearly 60,000 patients are now diagnosed each year in the United States, representing a significant public health problem.

*Ductal Carcinoma In Situ in BRCA Mutation Carriers ...*

In a similar way to DCIS (ductal carcinoma in-situ), lobular carcinoma in-situ (LCIS) is a pre-cancerous change in the cells of the breast. Under the microscope the appearance is distinct from DCIS because the abnormal cells crowd together and fill up the lobules of the breast rather than the milk ducts.

Core needle biopsy DCIS is most often discovered during a mammogram used to screen for breast cancer. If your mammogram shows suspicious areas such as bright white specks (microcalcifications) that are in a cluster and have irregular shapes or sizes, your radiologist likely will recommend additional breast imaging.

*Ductal carcinoma in situ (DCIS) - Diagnosis and treatment ...*

Carcinoma in situ of the breast represents a heterogeneous group of neoplastic lesions confined to the breast ducts (ductal carcinoma in situ [DCIS]). The diagnosis of DCIS increased dramatically following the introduction of screening mammography and now comprises approximately 25 percent of all newly diagnosed breast cancers.
