Environmental Factors And

Dental Caries
The aetiology of dental caries involves a complex interplay of individual, behavioural, social, economic, political and environmental conditions, and there is increasing interest in genetic predisposition and epigenetic modification.

Protocol for assessing maternal, environmental and ...

In this analysis we tried to assess genetic and environmental factors contributing to childhood caries in the Iowa Fluoride Study. Environmental factors (age, sex, race, tooth-brushing frequencies and water fluoride level) and three dental caries scores (d (2)fs-total, d (2)fs-pit/fissure, and d (2)fs-smooth surface) were assessed in 575 unrelated children (mean age 5.2 years).
