Feynman's Lost Lecture: The Motion of Planets Around the Sun is a book based on a lecture by Richard Feynman. Restoration of the lecture notes and conversion into book form was undertaken by Caltech physicist David L. Goodstein and archivist Judith R. Goodstein. Feynman had given the lecture on the motion of bodies at Caltech on March 13, 1964, but the notes and pictures were lost for a number of years and consequently not included in The Feynman Lectures on Physics series.

Richard Feynman, the rock star of theoretical physics, has left an image that belies the nerdy side revealed in Feynman's Lost Lecture: The Motion of Planets Around the Sun. Not many bongo-playing surfer beatniks would have spent hours of their spare time proving Newton's law of elliptical planetary motion using only plane geometry, but Feynman's Lost Lecture shows that the great man did just that.

This book is about the lost lecture of Richard Feynman on the motion of the planets around the sun. It is not a book by Feynman but by David and Judith Goodstein. The book contains Feynman's elementary proof that planets move in elliptical orbits around the sun (being one of the focus points) by first showing that the so-called velocity orbit of each planet is a perfect circle.

Discovered in the 1990s and first published in 1996, the "lost lecture" titled "The Motion of the Planets Around the Sun" uses nothing more than advanced high school geometry to explain why the planets orbit the sun elliptically rather than in perfect circles, as the Amazon description summarizes.
