This book draws readers' attention to the financial aspects of daily life at a corporation by combining a robust mathematical setting and the explanation and derivation of the most popular models of the firm. Intended for third-year undergraduate students of business finance, quantitative finance, and financial mathematics, as well as first-year postgraduate students, it is based on the twin pillars of theory and analytics, which merge in a way that makes it easy for students to understand the exact meaning of the concepts and their representation and applicability in real-world contexts. Examples are given throughout the chapters in order to clarify the most intricate aspects; where needed, there are appendices at the end of chapters, offering additional mathematical insights into specific topics. Due to the recent growth in knowledge demand in the private sector, practitioners can also profit from the book as a bridge-builder between university and industry. Lastly, the book provides useful information for managers who want to deepen their understanding of risk management and come to recognize what may have been lacking in their own systems.

Needles/Powers/Crosson's FINANCIAL AND MANAGERIAL ACCOUNTING continuously evolves to meet the needs of today's learner. This edition's new structure is based on research about how to deliver content to students and how to mirror the way instructors have told us they teach. The authors have organized this edition into a new three-section approach: 1. The CONCEPTS section focuses on the overarching accounting concepts that require consistent reiteration throughout the course. 2. The ACCOUNTING APPLICATIONS section helps students apply the accounting procedures with features such as Apply It! and a new transaction analysis model. 3. The BUSINESS APPLICATIONS section illustrates how concepts and procedures are used to make real-world business decisions.
