Literature has not always been written in the same ways, nor has it been received or read in the same ways over the course of Western civilization. Cavallo (Greek palaeography, U. of Rome La Sapienza), Chartier (Ecole des Hautes Etudes en Sciences Sociales, Paris) and a number of other international contributors, address themes that highlight the transformation of reading methods and materials over the ages, such as the way texts in the Middle Ages were often written with the voice in mind, as they would have been read aloud, or even sung. Articles explore the innovations in the physical evolution of the book, as well as the growth and development of a broad-based reading public.

Recent Research in Second Language Phonetics/Phonology: Perception and Production reports the findings of seventeen interphonology studies on perception/production of sounds by different first language speakers. All the papers describe careful empirical research, and as such will be of great interest to anyone working, or intending to work, in the specific field of second language phonological acquisition. However, given that speech production and perception are highly complex skills, the research findings in this volume will also be relevant to those with a broader interest in language learning or cognition in general.

From the bestselling author of *The Power of Habit* comes a fascinating new book exploring the science of productivity, and why, in today's world, managing how you think--rather than what you think about--can transform your life.

Productivity, recent studies suggest, isn't always about driving ourselves harder, working faster and pushing ourselves toward greater "efficiency." Rather, real productivity relies on managing how we think, identify goals, construct teams and make decisions. The most productive people, companies and organizations don't merely act differently--they envision the world and their choices in profoundly different ways. This book explores eight concepts that are critical to increasing productivity. It takes you into

the cockpit of two passenger jets (one crashes) to understand the importance of constructing mental models--telling yourself stories about yourself in order to subconsciously focus on what really matters. It introduces us to basic training in the U.S. Marine Corps, where the internal locus of control is exploited to increase self-motivation. It chronicles the outbreak of Israel's Yom Kippur War to examine cognitive closure--a dangerous trap that stems from our natural desire to feel productive and check every last thing off our to-do lists, causing us to miss obvious risks and bigger opportunities. It uses a high-achieving public school in Cincinnati to illuminate the concept of disfluency, which holds that we learn faster and more deeply when we make the data harder to absorb. It shows how the principles of

lean manufacturing--in which decision-making power is pushed to the lowest levels of the hierarchy--allowed the FBI to produce a software system that had eluded them for years. It explores how Disney made Frozen into a record success by encouraging tension among animation teams--a version of what biologists refer to as the Intermediate Disturbance Hypothesis, which posits that nature is most creative when crises occur. With the combination of relentless curiosity, deep reporting and rich storytelling that defined The Power of Habit, Charles Duhigg takes readers from neurology laboratories to Google's brainstorming sessions and illustrates how we can all increase productivity in our lives.

Architecture of Brazil: 1900-1990 examines the processes that underpin modern Brazilian architecture under various influences and characterizes different understandings of modernity, evident in the chapter topics of this book. Accordingly, the author does not give overall preference to particular architects nor works, with the exception of a few specific works and architects, including Warchavchik, Niemeyer, Lucio Costa, and Vilanova Artigas.
