HMC Machining Guide. Before the emergence of horizontal machining centers, vertical machines were a staple in the CNC industry. It was, and still is, commonplace to invest in vertical machines due to their 3-, 4-, and even 5-axis capability to produce reliably high-quality parts. And because CNC machines can last for decades (even longer in Okuma's case), as long as the machine is still doing its job, many shops feel there is no need to look elsewhere.

HMC Machining Guide | Okuma CNC Machine Tools

New Okuma grinders have introduced I-GAP+ on all control systems. I-GAP+ is the sheet programming function that can create truing programs, dress programs, and grinding programs by only entering the data on two screens. Programming is done by entering details of what features are being ground.
Grinding Program Creation Sheet

Grinding Machine Guide | Okuma CNC Machines

From loading and unloading to conveyor systems, automation allows you to optimize the flow of production without an operator performing repetitive tasks. Learn more in our complete guide to automation.
