Cancer/testis antigens are ideal targets for cancer immunotherapy because of their limited expression in normal tissues, aberrant expression in malignancies and their immunogenic properties. The aim of this study was to evaluate the potential of

Bookmark File PDF

cancer/testis antigen, MAGE-A11, as an immunotherapeutic target for development of a prostate cancer vaccine. To accomplish this, we produced the monoclonal antibody 5C4 that is capable of recognizing MAGE-A11 in formalin-fixed paraffin-embedded tissues. We also investigated the expression of MAGE-A11 in a wide variety of cancer cell lines to determine the scope of its expression in cancer. It was shown that MAGE-A11 is widely expressed in malignancies. The highest MAGE-A11 expression was observed in colon cancer and astrocytoma brain tumors. Finally, we identified three naturally processed MHC class II HLA-DR1 epitopes in MAGE-A11 protein, thus confirming its immunogenicity and its potential as a target for cancer immunotherapy.

Androgens are critical regulators of prostate differentiation and function, as well as prostate cancer growth and survival. Therefore, androgen ablation is the preferred systemic treatment for disseminated prostate cancer. Androgen action is exerted in target tissues via binding the androgen receptor (AR), a nuclear receptor transcription factor. Historically, the gene expression program mediated by the AR has been poorly understood. However, recent gene expression profiling and more traditional single-gene characterization studies have revealed many androgen-regulated genes that are important mediators of androgen action in both normal and malignant prostate tissue. This book will focus on the androgen-regulated gene expression program, and

examine how recently identified androgen-regulated genes are likely to contribute to the development and progression of prostate cancer. Recent studies that have attempted to unravel how these genes are deregulated in androgen depletion independent prostate cancer will be included

Handbook of Endourology contains five focused, review-oriented volumes that are ideal for students and clinicians looking for a comprehensive review rather than a whole course. Each volume is easily accessible through eBook format. Topics covered review both the endourological diagnosis and treatment of prostate, urethral, urinary bladder, upper urinary tract, and renal pathology. All chapters describe the most recent techniques, review the latest results,

and analyze the most modern technologies. In the past ten years, the field of endourology has expanded beyond the urinary tract to include all urologic minimally invasive surgical procedures. Recent advancements in robotic and laparoscopic bladder surgery make this one of the fastest moving fields in medicine. As current textbooks are too time-consuming for busy urologists or trainees who also need to learn other areas of urology, this collection provides quick references and over 4000 images that are appropriate for fellows as well as those teaching in the field. Offers review content for urologists in training and “ refresher ” content for experts in endourology Explores new surgical techniques and technology through review-level content and extensive images of pathologies

Includes over 500 images per volume; images taken from more than 4000 endourologic procedures performed annually at the editor ' s hospital

The American Joint Committee on Cancer's Cancer Staging Manual is used by physicians throughout the world to diagnose cancer and determine the extent to which cancer has progressed. All of the TNM staging information included in this Sixth Edition is uniform between the AJCC (American Joint Committee on Cancer) and the UICC (International Union Against Cancer). In addition to the information found in the Handbook, the Manual provides standardized data forms for each anatomic site, which can be utilized as permanent patient records, enabling clinicians and cancer research

Prostate Cancer, held in Cambridge in 1998. The contributors include scientists, epidemiologists and clinicians who provide both a North American and a European view of treatment. The patient's perspective is also considered.

This volume brings together the key research issues in clinical and laboratory science relating to metastasis in prostate cancer. Coverage ranges from the most fundamental aspects of the molecular biology of metastasis, to the patient in the clinic. The therapeutic approaches range from conventional drug design to immunogene therapy. Prostate cancer is an area of intense research effort, and this book provides a window on contemporary research in this important area.
