In her groundbreaking book, sociologist Saskia Sassen identifies two sets of processes that make up globalization. One is the set of global institutions, such as the World Trade Organization, global financial markets, the War Crimes Tribunals and the new global cosmopolitanism. However, there is a second set of processes, frequently ignored by most social scientists, that occur on the national and local level. These processes can include state monetary and fiscal policy, networks of activists engaged in local struggles that have an explicit or implicit global agenda, and local and national politics that are unknowingly part of global networks containing similar localized efforts. Sassen's new book focuses on the importance of place, scale and the meaning of the national to study globalization. By emphasizing the interplay between the global and the local, A Sociology of Globalization introduces readers to new forms and conditions such as global cities, transnational communities and commodity chains that are increasingly common. Sassen's expanded approach to globalization offers new interpretive and analytic tools to understand the complex ideas of global interdependence.

This classic work chronicles how New York, London, and Tokyo became command centers for the global economy and in the process underwent a series of massive and parallel changes. What distinguishes Sassen's theoretical framework is the emphasis on the formation of cross-border dynamics through which these cities and the growing number of other global cities begin to form strategic transnational networks. All the core data in this new edition have been updated, while the preface and epilogue discuss the relevant trends in globalization since the book originally came out in 1991.

A strong emphasis has been placed on creating a productive mixture of classic and contemporary readings which is highly readable and lively, yet remains challenging. Whilst particularly useful as a companion to the sixth edition of Giddens' s Sociology, the reader is designed for use independently or alongside other textbooks. The reader maintains the distinctive approach which Sociology pioneered: strongly comparative and historically informed, it stresses the influence of globalizing trends in social life. The carefully selected readings range from studies of face-to-face interaction through to the analysis of large-scale global systems, and cover sociological theories of society as well as research methods. Amongst the new selections in this volume are readings on the Internet and virtual communities, the impact of ecological thinking and climate change on social science, offshoring and the future of work, global cities, patriarchy and shifting gender relations, intersecting social inequalities, the idea and practice of restorative justice, new forms of cybercrime, war, terrorism and the prospects for a global cosmopolitan democracy. The readings are arranged in ten thematic sections and each section is preceded by a summary in order to facilitate students' comprehension and critical reflection. The result is an exciting new text that encompasses the major themes and debates in both classical and contemporary sociology. Sociology: Introductory Readings will be an essential resource for anyone who wishes to engage with the scope of sociological thought today. -- Back cover.

Essays discuss the effects of globalization on the nation-state, looking at dealings that both strengthen and weaken the national idea, creating a concentration of resources and a diminishing of responsibility

The last fifteen years have witnessed an explosion in the popularity, creativity, and productiveness of economic sociology, an approach that traces its roots back to Max Weber. This important new text offers a comprehensive and up-to-date overview of economic sociology. It also advances the field theoretically by highlighting, in one analysis, the crucial economic roles of both interests and social relations. Richard Swedberg describes the field's critical insights into economic life, giving particular attention to the effects of culture on economic phenomena and the ways that economic actions are embedded in social structures. He examines the full range of economic institutions and explicates the relationship of the economy to politics, law, culture, and gender. Swedberg notes that sociologists too often fail to properly emphasize the role that self-interested behavior plays in economic decisions, while economists frequently underestimate the importance of social relations. Thus, he argues that the next major task for economic sociology is to develop a theoretical and empirical understanding of how interests and social relations work in combination to affect economic action. Written by an author whose name is synonymous with economic sociology, this text constitutes a sorely needed advanced synthesis--and a blueprint for the future of this burgeoning field.

The reader is encouraged to think critically about the structures, meanings, histories and cultures found in the rapidly changing world we live in. With tasks to stimulate the sociological mind and suggestions for further reading both within the text and on an accompanying webpage, this book is essential reading for all those studying sociology, and those with an interest in how the modern world works.

New Directions in the Sociology of Human Rights is a contribution to both sociology and to human rights research, particularly where these are directed towards challenging power relations and inequalities in contemporary societies. It expands and develops the sociology of human rights as a sub-field of sociology and interdisciplinary human rights scholarship. The volume suggests new directions for the use of social and sociological theories in the analysis of issues such as torture and genocide and addresses a number of themes which have not previously been a sustained focus in the sociology of human rights literature. These range from climate change and the human rights of soldiers, to corporate social responsibility and children's rights in relation to residential care. The collection is thus multi-dimensional, examining a range of specific empirical contexts, and also considering relationships between sociological analysis and human rights scholarship and activism. Hence in a variety of ways it points the way for future analyses, and also for human rights activism and practices. It is intended to widen our field of vision in the sociology of human rights, and to spark both new ideas and new forms of political engagement. This book was published as a special issue of The International Journal of Human Rights.

Computer-centered networks and technologies are reshaping social relations and constituting new social domains on a global scale, from virtually borderless electronic markets and Internet-based large-scale conversations to worldwide open source software development communities, transnational corporate production systems, and the global knowledge-arenas associated with NGO networks. This book explores how such "digital formations" emerge from the ever-changing intersection of computer-centered technologies and the broad range of social contexts that underlie much of what happens in cyberspace. While viewing technologies fundamentally in social rather than technical terms, Digital Formations nonetheless emphasizes the importance of recognizing the specific technical capacities of digital technologies. Importantly, it identifies digital formations as a new area of study in the social sciences and in thinking about globalization. The ten chapters, by leading scholars, examine key social, political, and economic developments associated with these new configurations of organization, space, and interaction. They address the operation of digital formations and their implications for the development of longstanding institutions and for their wider contexts and fields, and they consider the political, economic, and other forces shaping those formations and how the formations, in turn, are shaping such forces. Following a conceptual introduction by the editors are chapters by Hayward Alker, Jonathan Bach and David Stark, Lars-Erik Cederman and Peter A. Kraus, Dieter Ernst, D. Linda Garcia, Doug Guthrie, Robert Latham, Warren Sack, Saskia Sassen, and Steven Weber.
