The strategy of morbidity control focuses on the population of an endemic country. Schistosomiasis is caused by the insanitary habits of man. Schistosomiasis is acquired by man as he performs necessary daily activities associated with fresh water-working, bathing, washing, fishing, and recreation.

WHO | The control of schistosomiasis

After five decades' of effort, China has made great achievements in schistosomiasis control and the infection prevalence and intensity of schistosomiasis in humans have decreased to a relatively low level [6,8]. The achievement, to a large extent, is attributable to praziquantel-based chemotherapy, and prompts an increasing understanding of the need for sufficiently sensitive and specific diagnostic or screening techniques of schistosomiasis in low transmission settings.

A diagnostic challenge for schistosomiasis japonica in ...

The control of schistosomiasis is based on large-scale treatment of at-risk population groups, access to safe water, improved sanitation, hygiene education, and snail control. The WHO strategy for schistosomiasis control focuses on reducing disease through periodic, targeted treatment with praziquantel through the large-scale treatment (preventive chemotherapy) of affected populations.

Schistosomiasis - World Health Organization

In spite of great progress in controlling the disease, it is still one of the most serious parasitic diseases in the country. The study and use of diagnostic techniques play an important role in the targeting of chemotherapy that has been continuously applied in the national schistosomiasis control programme for several decades.
