The most prevalent theory is called The Big Splat Theory. Essentially, many scientists believe that the Earth once had two moons, until they collided, leaving the Earth with one larger, slightly lopsided moon. For a long time, scientists struggled to explain why the nearside of the moon appeared so different from the far side of the moon.

The giant-impact hypothesis, sometimes called the Big Splash, or the Theia Impact, suggests that the Moon formed from the ejecta of a collision between the proto-Earth and a Mars-sized planetesimal, approximately 4.5 billion years ago, in the Hadean eon. The colliding body is sometimes called Theia, from the name of the mythical Greek Titan who was the mother of Selene, the goddess of the Moon. Analysis of lunar rocks, published in a 2016 report, suggests that the impact may have been a direct h
