questions and recognizing what is truly important.

"If it is beyond your power to control, let it go." "Do not wish that all things will go well with you, but that you will go well with all things." In this way, you will overcome life's challenges, rather than be overcome by them." Epictetus (c. AD 50-135) was a former Roman slave who became a great teacher, deeply influencing the future emperor Marcus Aurelius among many others. His philosophy, Stoicism, was practical, not theoretical--aimed at relieving human suffering here and now. Epictetus knew suffering--besides being enslaved, he was lame in one leg and walked with a crutch. The Manual is a collection of Epictetus' essential teachings and pithy sayings, compiled by one of his students. It is the most accessible and actionable guide to Stoic philosophy, as relevant today as it was in the Roman Empire. This new edition, published by Ancient Renewal, is rendered in contemporary English by Sam Torode.

The transition from elementary school to middle school can be particularly difficult for boys. Too big to be little and too little to be big, they face the perfect storm of changing bodies, rushing hormones, and learning challenges. They may now begin to struggle with grades, behavior, and relationships with family and friends. Boys are often frustrated and embarrassed by trying to figure out on their own what to do and what not to do in this new environment with new expectations. Jonathan Catherman and his two sons--one current and one former middle schooler--offer boys ages ten to twelve the practical help they need to make the move to middle school as painlessly as possible. The "do this, not that" format covers a hundred relevant topics and situations middle school boys will face, including school lockers, bullies, test taking, cell phone use, homework, gossip, leadership, respect, sports, and many more.

This concise and readable manual is a useful resource for anyone interested in the design of engineered products and equipment. The Design for Everything Manual integrates a wide range of "design for X" topics such as user-centered design, efficient design, design for manufacture, and coordinated product and process design into a unified "Design for Everything" approach that is easily understood and used regardless of technical background or training. Over the years, a wealth of practical design knowledge has been learned about how to achieve good design. This knowledge is captured by four fundamental rules of good design: the rule of needs, the rule of clarity, the rule of simplicity, and the rule of safety. Good design is achieved by applying these rules in a systematic and disciplined manner to the critical choices that define the design. The manual is derived from notes that the author developed over many years of teaching a course on "Design for X" in the Master of Product Design and Development Program at Northwestern University, Evanston, Illinois. "Design for X" (DFX for short) is a label applied to a large collection of design methods (e.g., Design for Assembly, Lean Design) and design guidelines that address particular design issues. The Design for Everything Manual focuses on the principles and practices that underlie the DFX methods rather than on the methods themselves. It covers the same material and addresses the same spectrum of concerns, but in a simpler and more integrated fashion. Design for Everything is a strategic design approach that is of value to those studying, teaching, and practicing design across a wide range of disciplines. Design and manufacturing executives, product managers and project managers, and other high-level decision makers can use the manual to quickly learn how to achieve good design. Experienced design engineers and industrial designers can use it as a handy reference. Business students and engineering students can use it as a practical guide for new product development courses and senior design projects. Manufacturing companies can use it to develop a "common language" and "shared vision" for good design. Ultimately, all designers can use it as a guiding light for achieving the elusive goal of "doing it right the first time."

Searchable electronic version of print product with fully hyperlinked cross-references.

If you want to write a book that's going to sell to both publishers and readers, you need to know how to produce a marketable work and help it become successful. It starts the moment you have an idea. That's when you begin thinking about the first elements of the business plan that will make your project the best it can be. The reality is that you don't want to spend time and energy writing a book that will never get read. The way to avoid that is to create a business plan for your book, and evaluate it (and yourself) through the same lens that an agent or acquisitions editor would. The Author Training Manual will show you how to get more creative and start looking at your work with those high standards in mind. Whether you're writing fiction or non-fiction, or intend to publish traditionally or self-publish, author Nina Amir will teach you how to conduct an effective competitive analysis for your work and do a better job at delivering the goods to readers than similar books that are already on the shelf. Packed with step-by-step instructions, idea evaluations, sample business plans, editor and agent commentaries, and much more, The Author Training Manual provides the information you need to transform from aspiring writer to career author.
