Performance measurements: Web performance involves measuring the actual and perceived speeds of an application, optimizing where possible, and then monitoring the performance, to ensure that what you've optimized stays optimized. This involves a number of metrics (measurable indicators that can indicate success or failure) and tools to meaure those metrics, which we will discuss throughout this module.

~~What is web performance? - Learn web development | MDN~~
Performance is a necessary pillar of web development in which every web developer should stay current on best practices. It may "profoundly affect the initial reaction of the users when they first visit your website, and can in-turn impact the subscription base of your beloved product or blog page" according to Owen Far of Hackernoon**.

~~How to Improve Website Performance for Stronger User ...~~
In this code, shouldComponentUpdate is just checking if there is any change in props.color or state.count.If those values don't change, the component doesn't update. If your component got more complex, you could use a similar pattern of doing a "shallow comparison" between all the fields of props and state to determine if the component should update.

Critical to developing relevant and effective web analysis is creating objectives and calls-to-action from your organizational and site visitors goals, and identifying key performance indicators (KPIs) to measure the success or failures for those objectives and calls-to-action. Here are some examples for building a measurement framework for an informational website:

~~Web Analytics Basics | Usability.gov~~
Plans are instructed to conduct root-cause analysis and action plan for measures where there is poor performance based on the barriers identified. The action plans are reviewed and approved by OQPS staff and are monitored throughout the year to assure that they are being conducted and evaluated for effectiveness in improving performance.
