Education, East and West, is today mostly Western in orientation. Asian perspectives remain relatively unrepresented in curricula, pedagogy and administrative structures. This volume has brought together authors researching in Asia who redress this imbalance and describe what the West can learn from the East. Topics covered include conceptions of and approaches to effective learning and teaching, selfregulated learning, perceived causes of success and failure, valuing of education, peer influences and classroom behavior, creativity, teacher commitment, class size, motivation, future goals, and other influences on effective learning. Shared insights from the research and theorizing presented should provide a fascinating perspectives for educators and administrators charged with providing cuttingedge, researchbased educational best practices in diverse cultural and social environments internationally.

How can health services in the UK and Europe be improved? And can costs be reduced at the same time? Over the years, many ideas have been put forward - from increased spending on preventive healthcare to the better use of technology to reduce bureaucracy and 'pay for performance' schemes. But author Nima Sanandaji says this is merely tinkering at the margins. What's needed, he argues, is a completely new approach - one which embraces disruptive innovations from a new breed of entrepreneurs. Allowing true entrepreneurialism in healthcare might be considered extreme in a Western setting - but he points to a spectacular wave of success in the East to support his case. In India, Thailand, China and the Middle East, entrepreneurs have drawn inspiration from the motor industry to streamline procedures and create economies of scale. In areas such as heart surgery, they've dramatically driven down costs - and dramatically improved outcomes. So much so that the new market economies of the East are now, he contends, many steps of ahead of the West. In The Henry Fords of Healthcare Sanandaji outlines the lessons the West can now learn from the East, making a radical, compelling and controversial contribution to the debate on our own ailing health systems.

This book provides an in-depth evidence-based analysis on the issue of democracy and good governance, using hundreds of actual examples comparing the Chinese and Western political systems based on theories, structure, processes and performance. The current Chinese political system is designed for wide-based consultation with socialism as their core value whilst avoiding the flaws inherent in the design, process and structure of the Western political model. Despite the democratic nature of Chinese politics that persistently attracts a very high level of citizen satisfaction in each and every public opinion survey when compared to any Western democracy, the Western media has successfully brainwashed the world into believing that the Communist Government in China is an autocratic regime. In reality, Western democracies are in serious trouble, facing an unprecedented level of debt, unemployment, political corruption in the form of political donations, advertising and lobbying, and social dissatisfaction. It is the Western political system that requires urgent reform, or risks a revolution from the 99% -- its people -- in the foreseeable future. Therefore, it is time to have a look at the merits of the Chinese model.

An FT SUMMER READ 2020 The forces of globalization have transformed the world economically, but in the West politics is becoming increasingly fractured as living standards stagnate for all but the very wealthy. As a result, alienation and nationalism are on the rise. China, in the meantime, has become the most powerful economy in the world from the same forces of globalization which have imprisoned the west. Here, Grzegorz W. Kolodko parses the economic system in China and brings his uniquely clear and far sighted analysis to bear on the global economy. Through a qualitative and extensive quantitative economic analysis of the global economy, and it's tilt towards Asia, Kolodko offers prescriptions on how the west can learn from China's approach, and make globalization work for citizens once more. An essential book for scholars and students of political economy, from one of the West's most authoritative scholars and practitioners. Translated by Joanna Luczak

The structured approach to innovation favored by mature companies can't deliver the agility and differentiation they need today.
